Your needs, our technology

# UX WORKFLOW

FOR ENJOYABLE SOLUTIONS

## Through the eyes of a user

No matter what your project is capable of, if your users won't understand it, they won't use it.

The goal of our approach is to create an easily understandable product by looking at the design through the eyes of the users. In every step of the design process, we ask ourselves: What would our target group think of this? But this is not nearly enough. This is why actually ask people what they think about our vision as early in the design stage as possible. When the end product is released, we collect feedback and act on it. With this method, the project continuously evolves to always be better!

# BUSINESS APPLICATIONS

## Reaching out to participants

### A 21st century guide

For an event with a great amount of details, quick and easy to understand communication of information is a must. ODP was an application for the participants of the 2017 National Student Parliament. Everything a student must have known for a full experience of the weekend was available through the application. Also organizers had a common platform for communicating changes in schedule, information of public interest, etc.

The platform also had social aspects, after all, it was for 14-18 year old students, who grew up in the Facebook era.

This made communication between participants, and also between participants and organizers, easy and straightforward. This feature was an idea which came off of a UX brainstorming session when talking about the target group and was a massive success with the users!

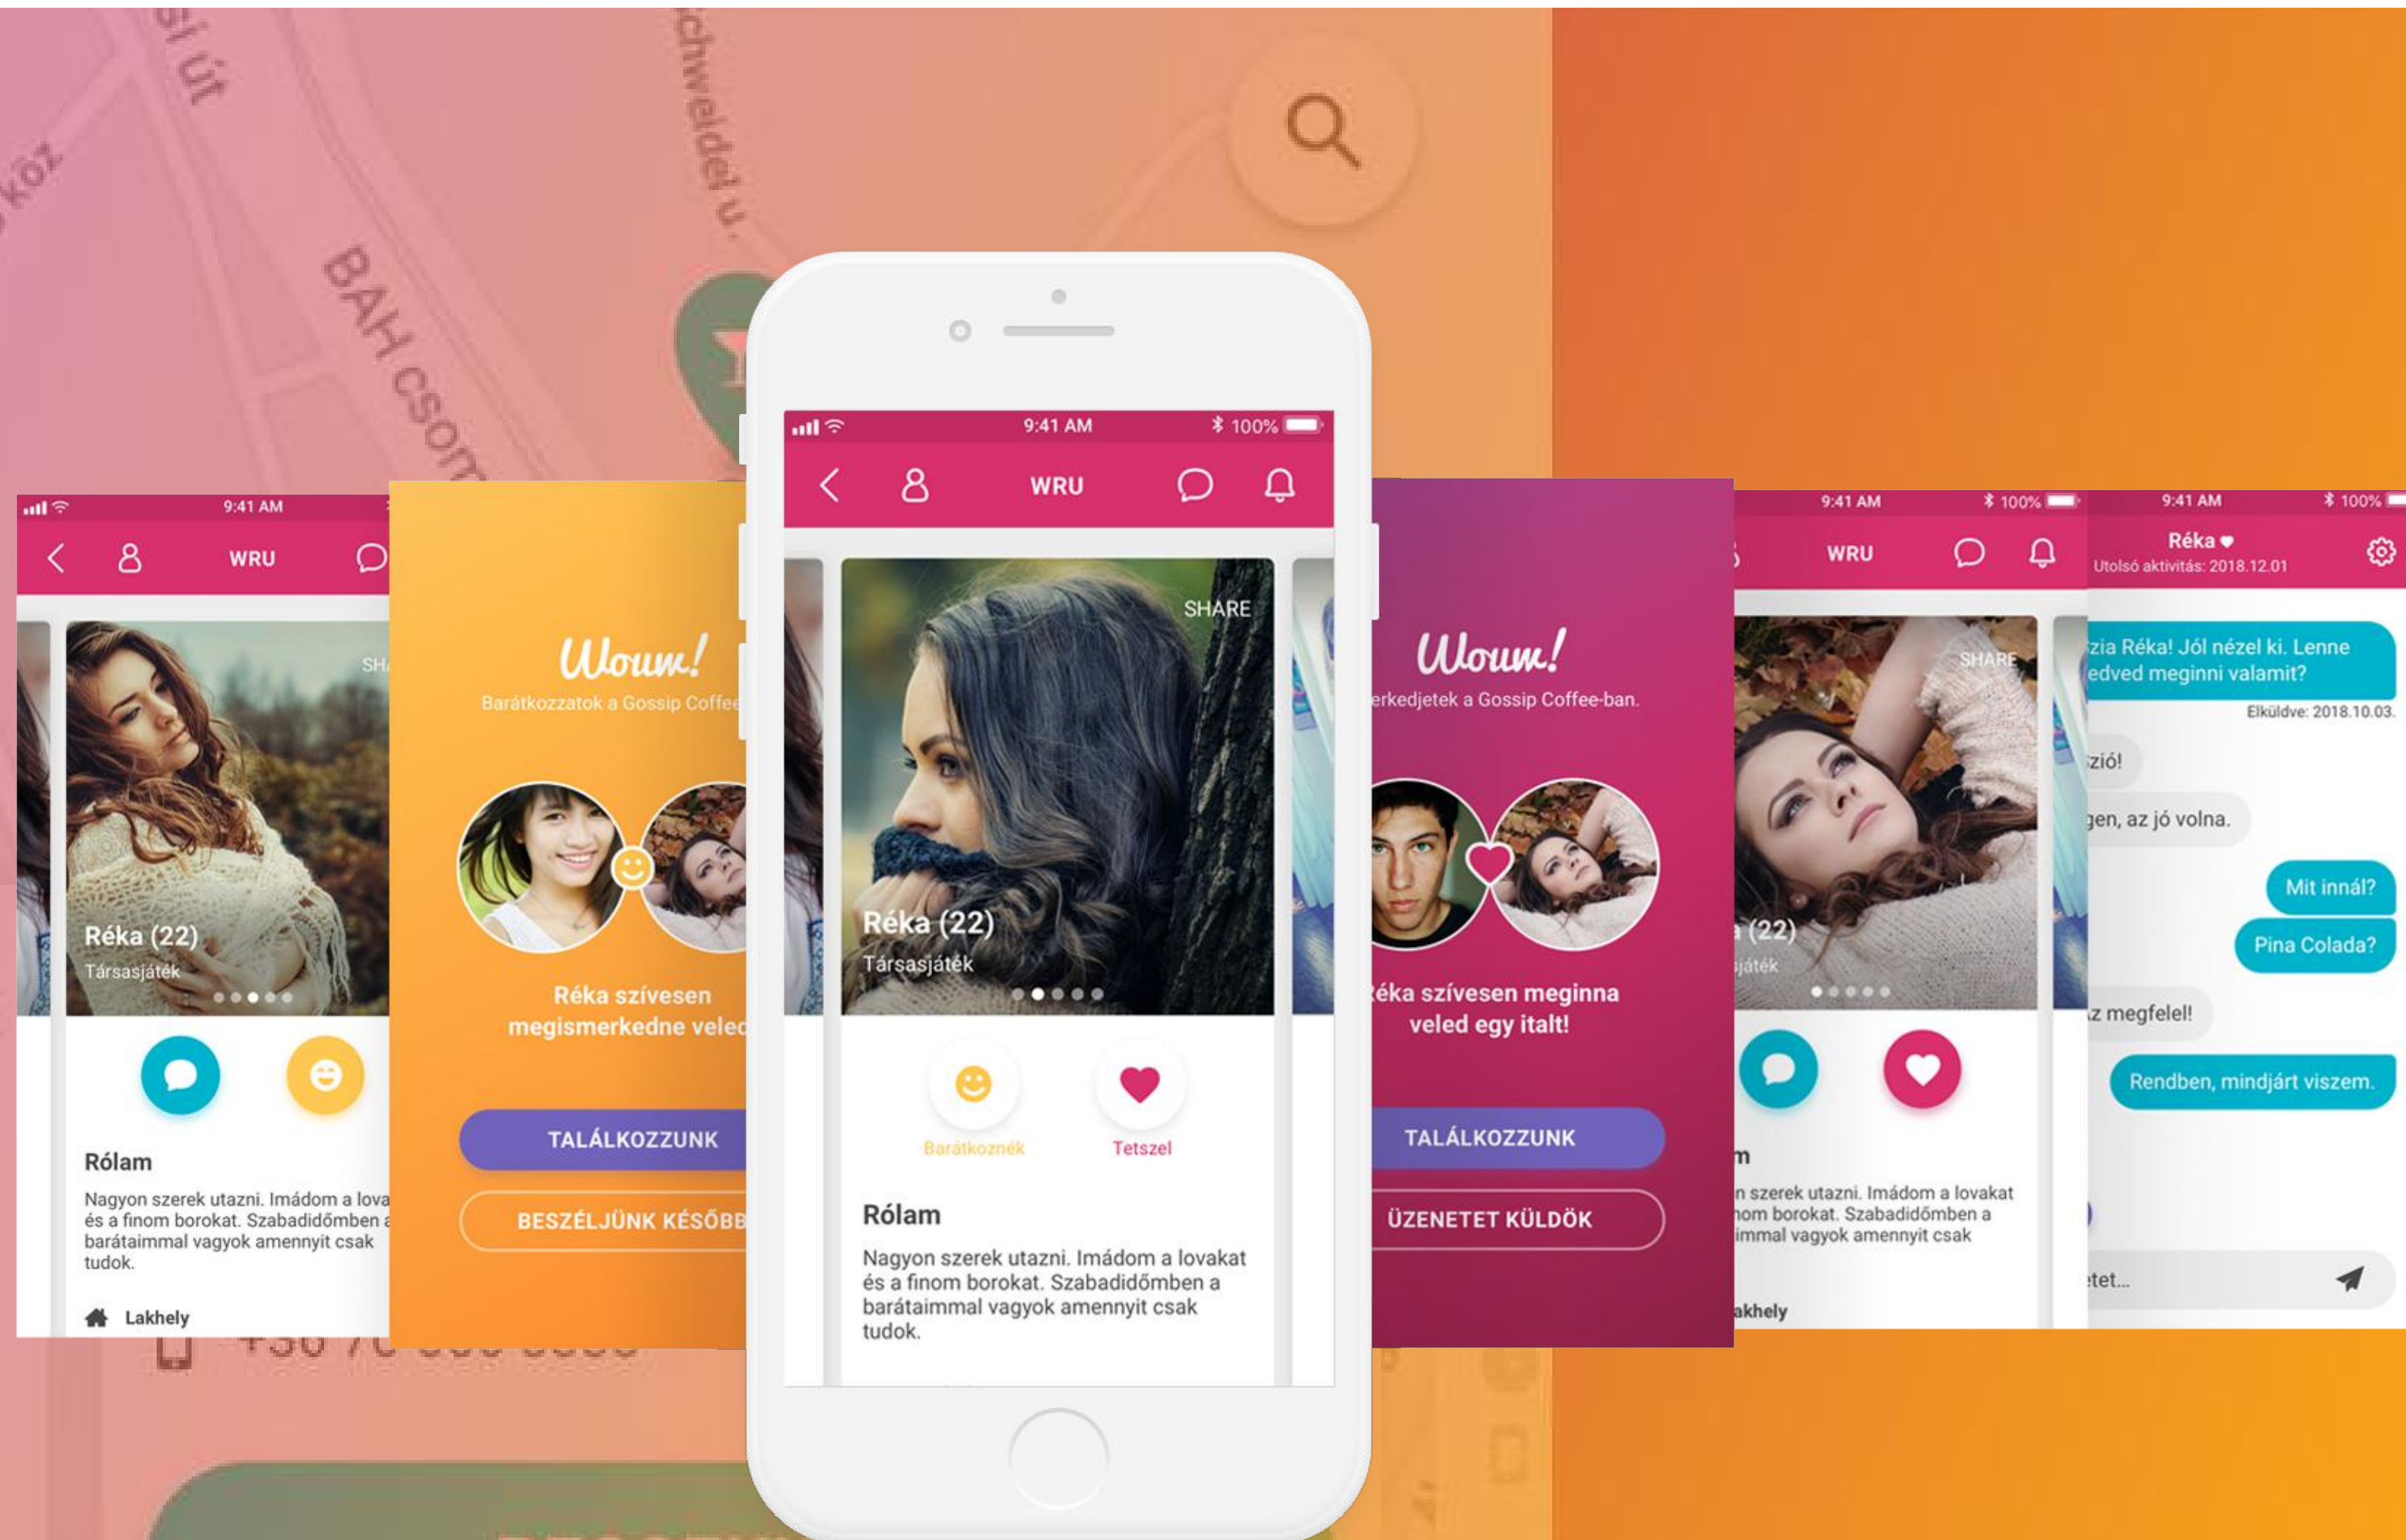

MEET IN PERSON!

ABSOLUTE SAFETY, ZERO GHOSTING

## WRU - WHERE ARE YOU? WHO ARE YOU?

Endless texting often does not get you to meet the desired person. With WRU you can meet in person within minutes of matching.

For people who are in a relationship, WRU is not only for finding a date, but for finding new friends! Check in to a place, select a status and let everyone know what you're looking for. It can be company for board games, or just someone to chat about yesterday's game next to a beer. Main goal of WRU is to bring people together, enabling meeting new people in person easily. Safety and getting rid of ghosting is our main concern.

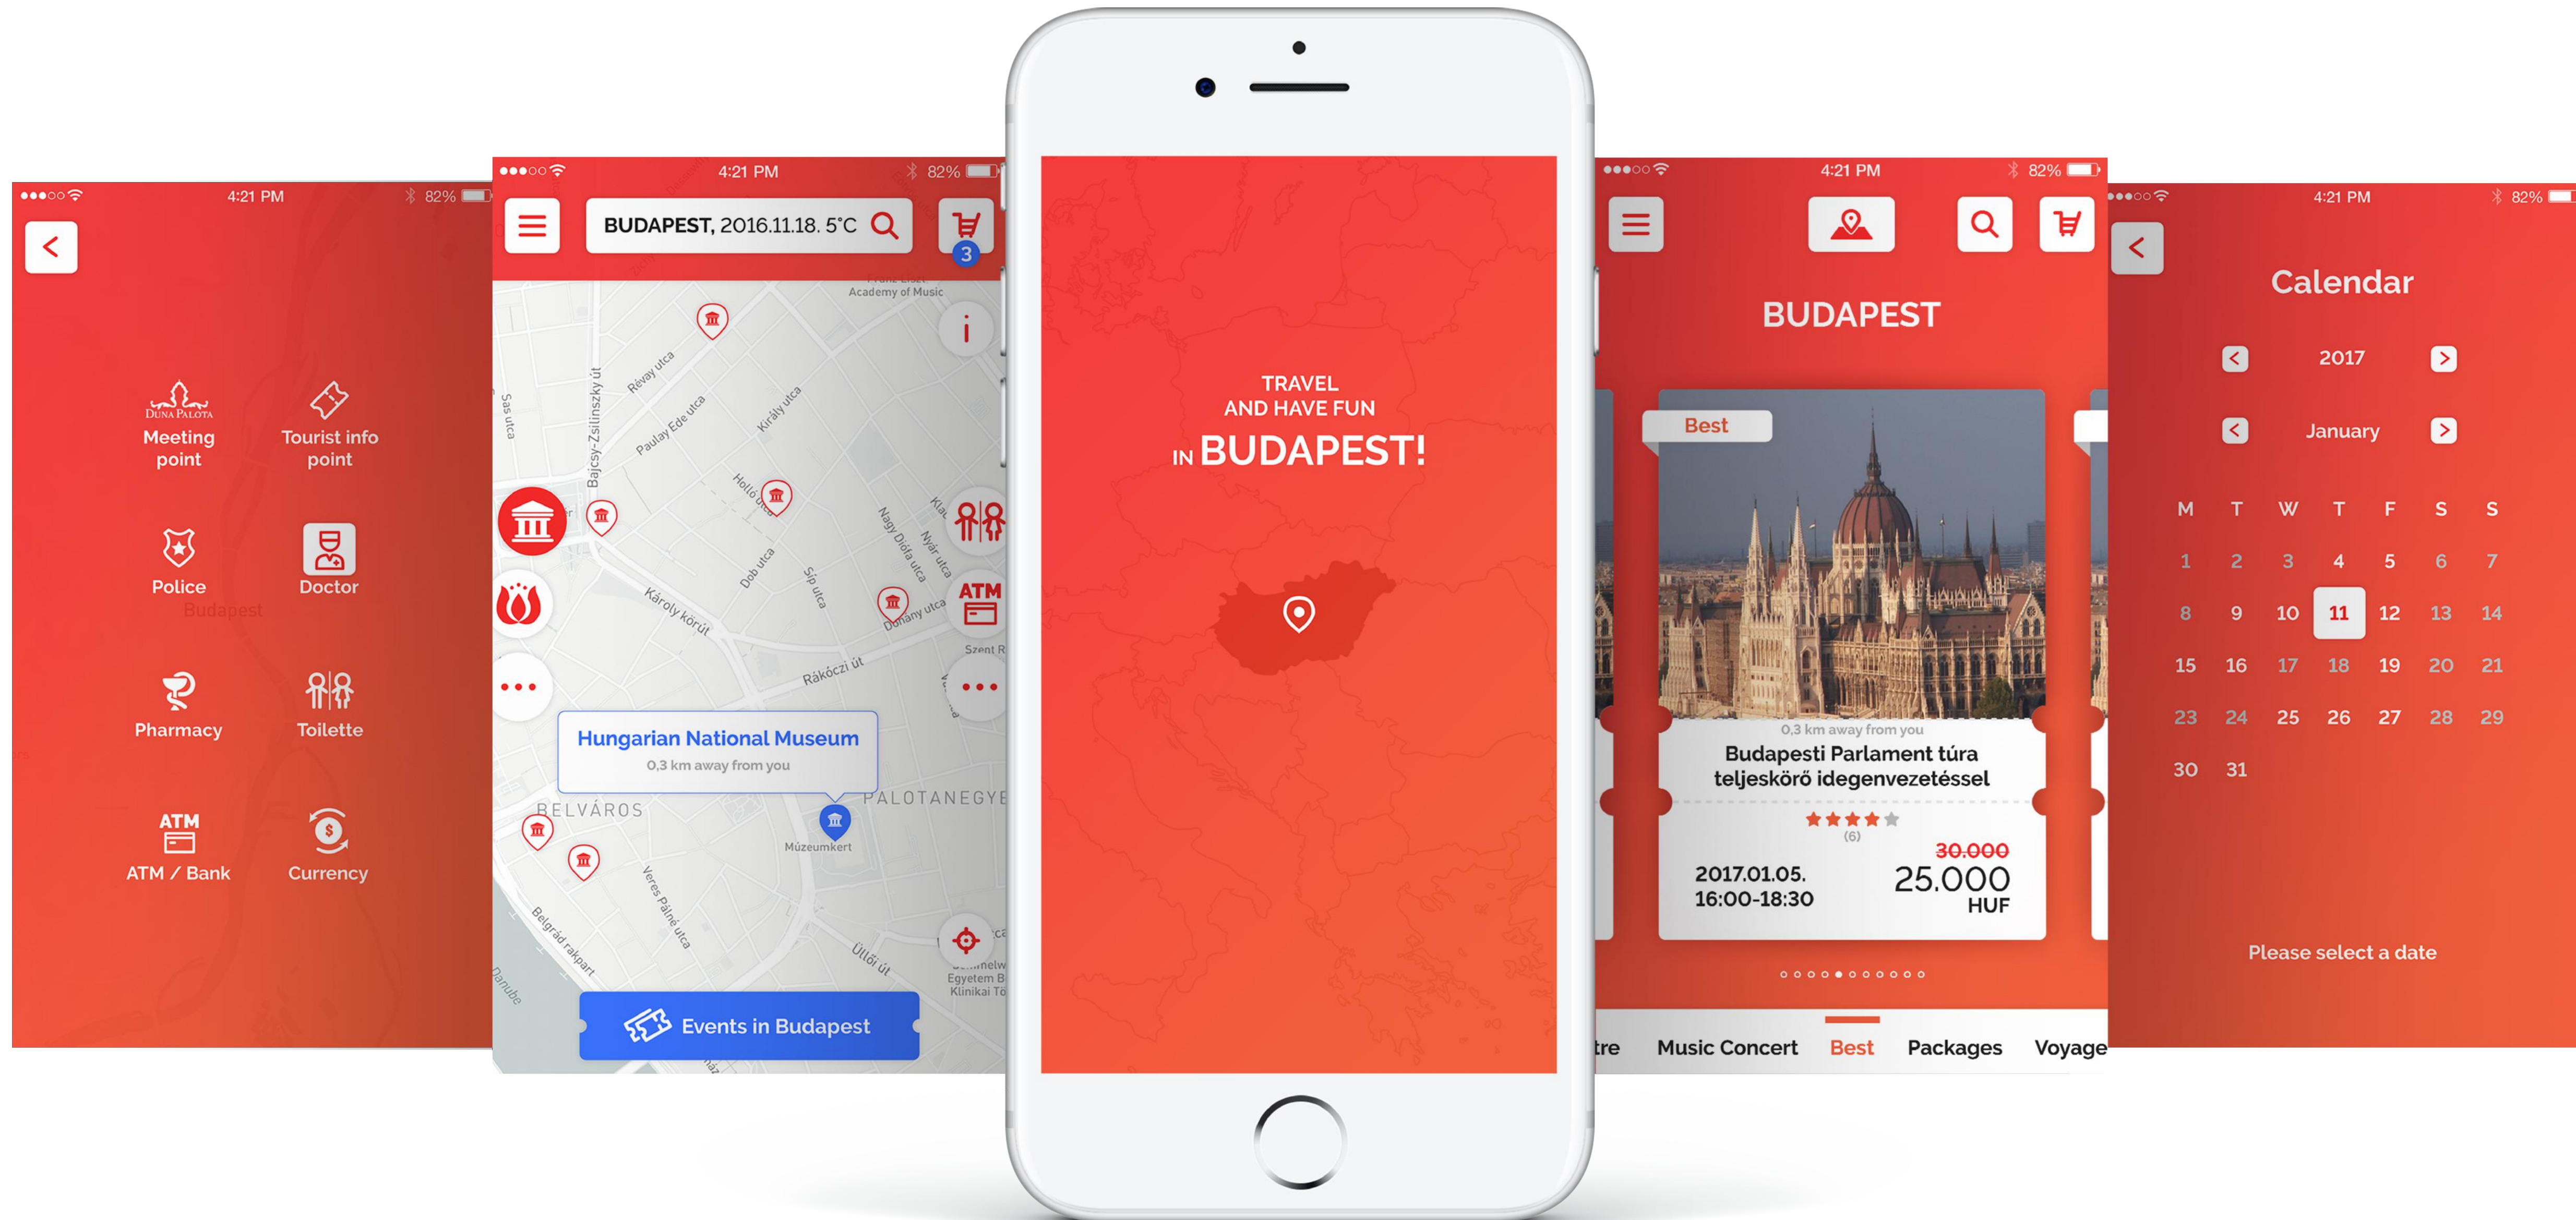

# BUDAPEST EXPLORE

PROVIDING FREE INFORMATION WITH A HINT OF SELF MARKETING

KIOSK APP FOR SNEAKERZ SHOP

## SNEAKER CAM

Share your looks

We are constantly developing business applications for different purposes. The goal can be to boost sales, create new opportunities for customers, or anything your intent may be, we can create a mobile application for your company.

Our skills include UX research and design, UI and graphics design, and development. We can implement detailed analytics and offer long term support for our projects.

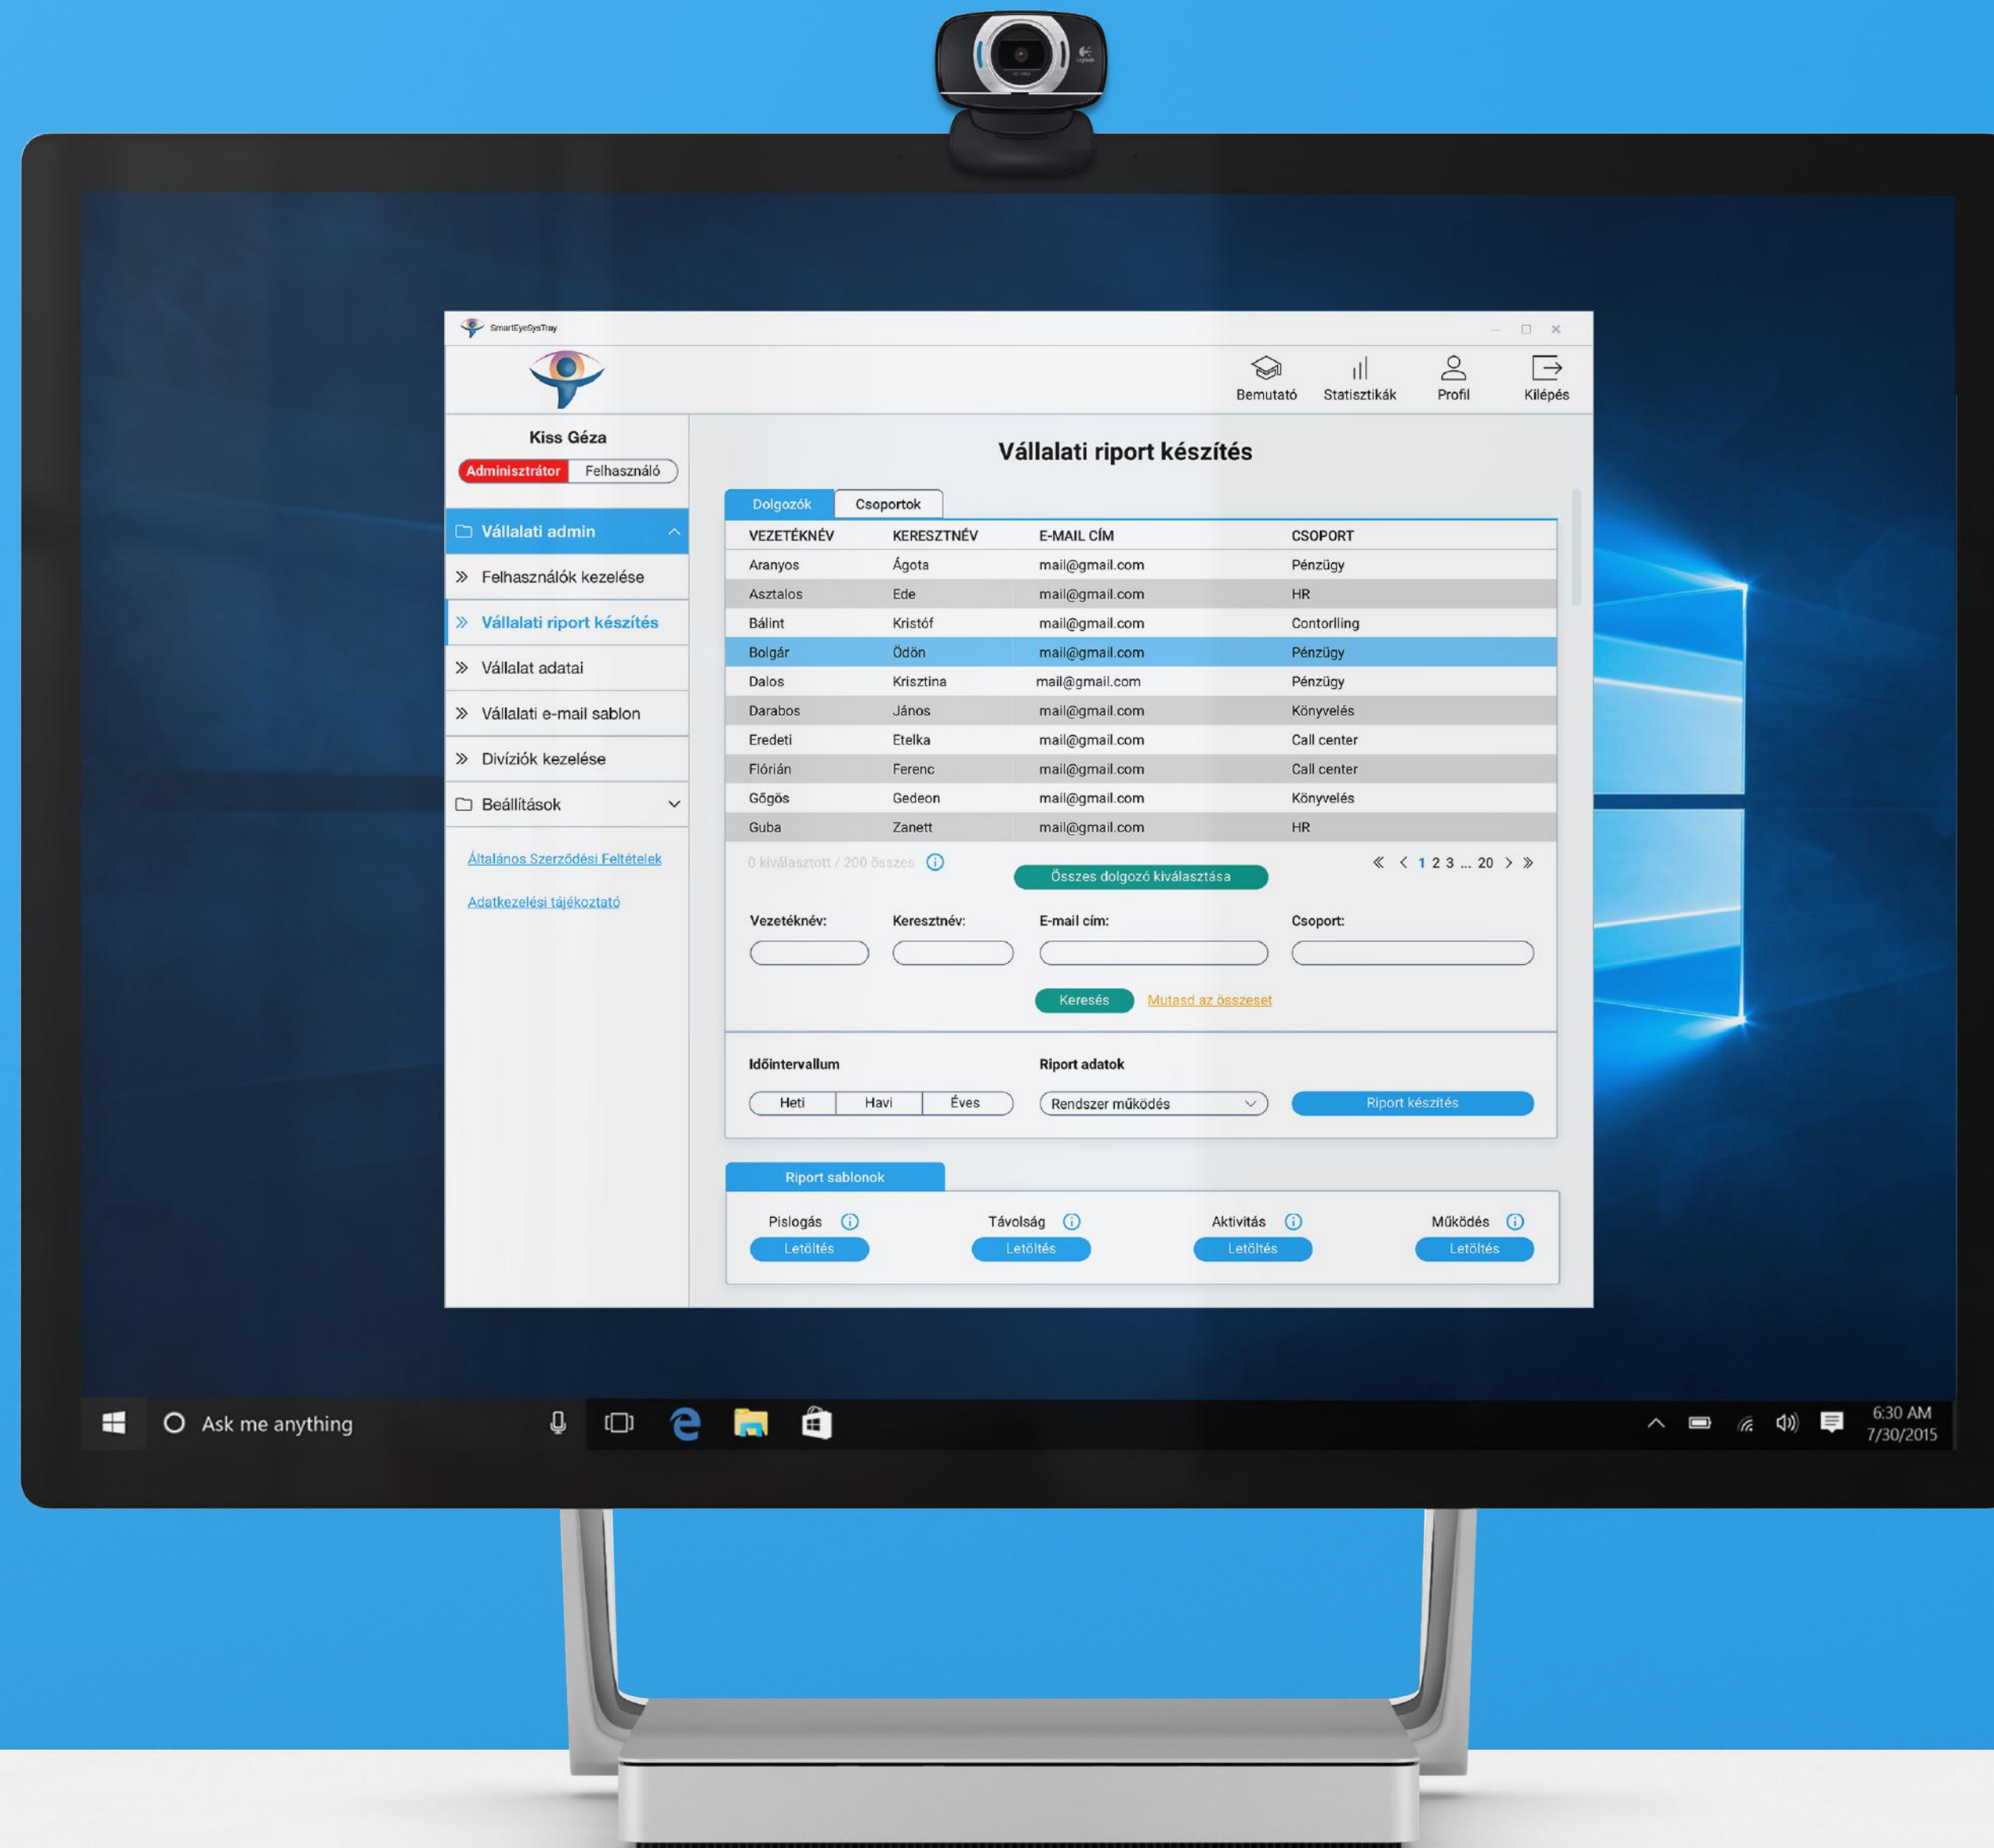

# Your health is important!

Even while working

Smart Eye-Saver aims to help office workers eliminate health risks that occur while working in front of a computer screen.

Employees who use the software receive notices about their mandatory breaks, their blinking is tracked through a camera in order to preserve the health of their eyes, and receive prompts if they are too close to the screen.

# SUPERVISING WORKFLOW FOR RENDER STUDIOS

RNM is the solution!

Render farm consist of many computers which, in ideal conditions, need to work flawlessly 24/7 every day. Render Node Monitor provides real-time feedback from all nodes in a render farm to fix errors in the workflow as soon as they appear. From the website, the users can start and stop render tasks or use operating system functions with a single click.

The dashboard shows the statuses of all connected computers, what task they work on, and all the important hardware statistics.

RNM comes with a mobile application for iOS and Android!

The screenshot displays the Render Node Monitor (RNM) web dashboard. The interface is organized into a header, a main table, and a bottom control bar.

**Header:** Includes navigation links (Dashboard, Settings, Statistika, History log), the RNM logo, and user options (Help, Feedback, Payment, Profile).

**Main Table:** Displays a list of machines under 'Group Name 1'. The table columns are: MACHINE, USER, RAM, CPU, GPU, VRAM, BBURNER, CORONA, UNREAL, V-RAY, V-RAY RT, and BLENDER. Each machine row shows its status (e.g., 'Working') and a 'Restart' button. A 'Timed commands' modal is open, showing 'IDLE' and 'SCHEDULED COMMANDS' with a 'Restart' button.

**Bottom Control Bar:** Features a large green '(Re)Start' button, a toggle for 'Idle' (05:00), a toggle for 'Scheduled execution' (00:00), a large orange 'Stop' button, and a 'Cancel commands' button.

# MOBILE GAME DEVELOPMENT

## AR/VR

# THE DUEL VR

The Duel is a **multiplayer FPS (first person shooter)** for the Samsung **GearVR**. You can play against the AI, or even better, challenge someone

# Castaways VR

This is **Castaways**, a cartoony adventure game for curious kids and adults alike!

# MUSIVERSE™

A **rhythm-racer** set in space which lets you play to your music on your device.

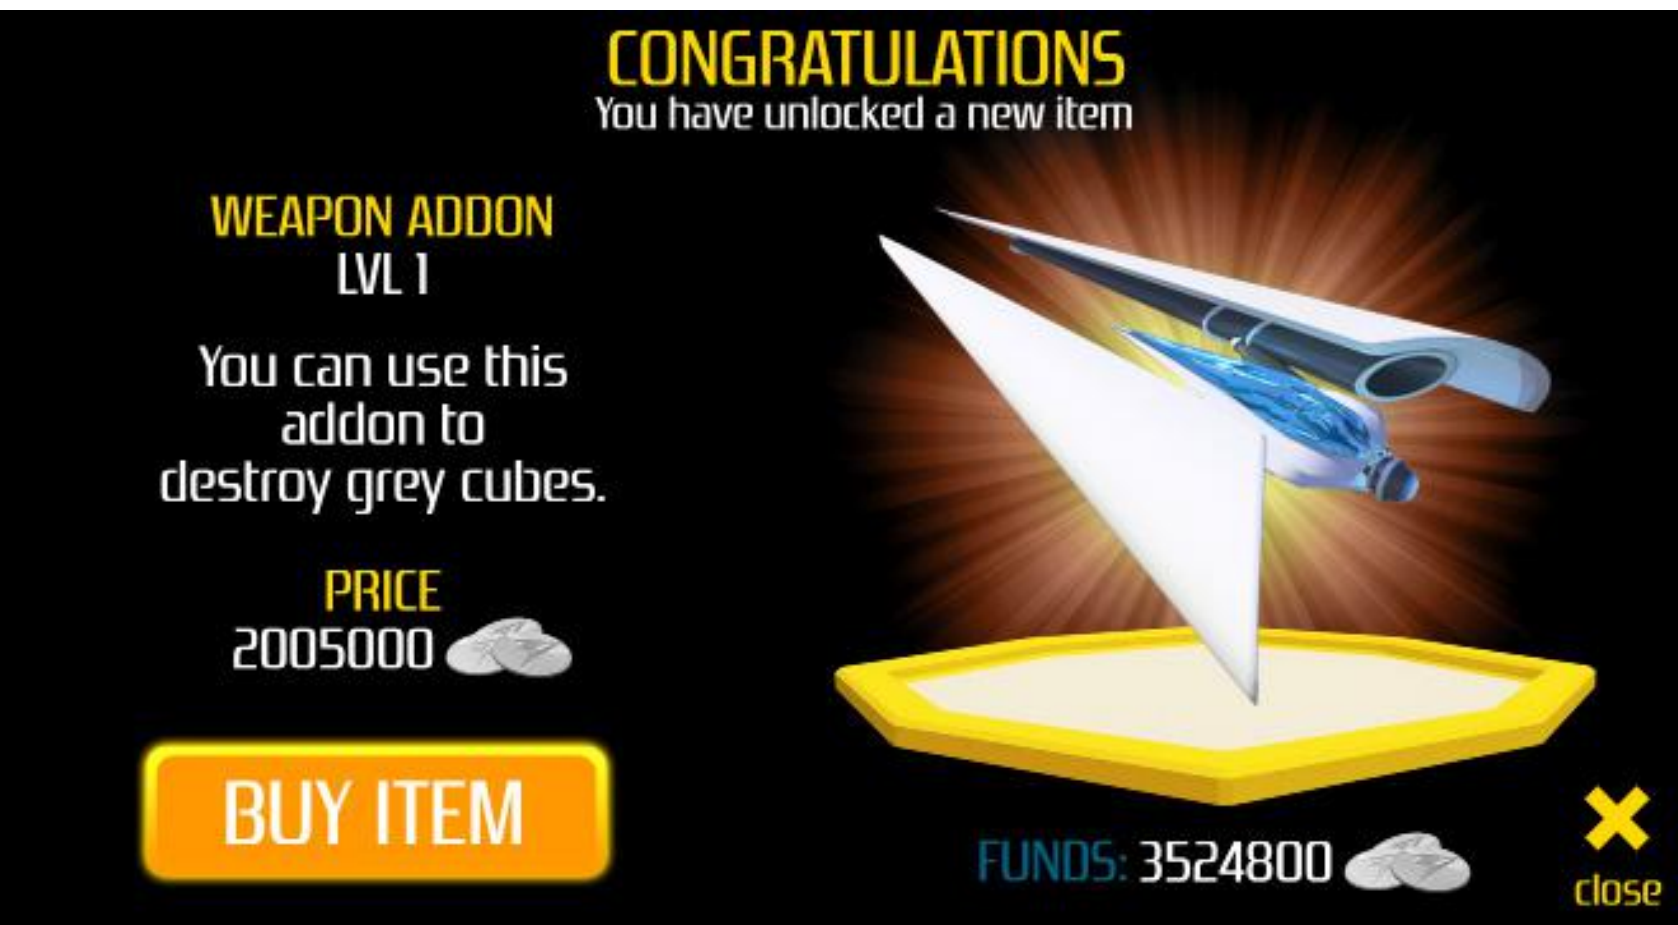

# MUSIVERSE™

A **rhythm-racer** set in space which lets you play to your music on your device.

Our team consists of young agile professionals with **5 years of experience working in game development** with the goal of creating functional and captivating games made with **Unity3D**. We are **competent in every phase of the development cycle**, whether be it the design, research, implementation, testing or publishing.

# SMART EGG

A puzzle game based on logic and speed in a **Rubik-like** fashion.
